

ABSTRACT

In a channel selection and video recording reservation of television broadcast programs, a video recording and playback device applies a program list display device which can visually display a past video recording state and a guide of programs scheduled to be broadcast. While on a program guide screen program information cells showing individual program information are arranged in a table having a channel attribute on a horizontal axis and a date and hour attribute on a vertical axis. A display filter setting screen is provided so as to restrict the program information cells to be displayed, and only the program information cells 207 showing the program information of the programs having a broadcast day of the week designated by a day-of-the-week designation and a broadcast period of time designated by a time designation are displayed on the program guide screen.
